PROFESSIONAL SUMMARY

Cloud & Full-Stack Engineer | AWS Serverless

Builder with 3+ years of hands-on software development, including 1.5 years shipping AWS systems at Amazon: 20+ serverless automations and services (Python, TypeScript, Lambda, EventBridge, CDK) delivering real-time operational alerts to managers, plus backend and data features for a quality management platform in daily production use. Independently built and operate a production RAG system on Amazon Bedrock with full evaluation and observability tooling. AWS Certified Solutions Architect. Comfortable owning the entire lifecycle solo: requirements, architecture, infrastructure as code, CI/CD, automated testing, security hardening, and production monitoring.

TECHNICAL SKILLS

Languages	Python (incl. pandas), TypeScript, JavaScript, SQL, HTML/CSS
AWS	Lambda, API Gateway patterns, DynamoDB (incl. Global Secondary Index design), S3, EventBridge, CloudFront, Lambda@Edge, Simple Email Service (SES), Simple Notification Service (SNS), Systems Manager (SSM) Parameter Store, Identity and Access Management (IAM) least-privilege policies, CloudTrail, CloudWatch, Real User Monitoring (RUM), WAF, Route 53, VPC (subnets, NAT, gateway endpoints), Amazon Bedrock
Infrastructure & DevOps	AWS Cloud Development Kit (CDK), Infrastructure as Code (IaC), CI/CD pipelines, gradual/canary deployments, Docker and container-based Lambda, Linux/WSL, Git
Frontend & Backend	React 19, Next.js, tRPC, Node.js, React Query, Zustand, React Router, Tailwind CSS, Cloud-Scape Design System, Nx monorepos, REST APIs, FastAPI, Flask, Supabase, WCAG 2.1 AA accessibility
Testing & Quality	Vitest, property-based testing (fast-check), Pytest, ESLint, snapshot testing, Storybook, React Testing Library, CI-integrated test suites, mypy type checking
AI / ML	Retrieval-Augmented Generation (RAG), Amazon Bedrock (LLM integration, Knowledge Bases, S3 Vectors), LangChain, vector embeddings, prompt engineering, streaming LLM responses, LLM evaluation (golden datasets, LLM-as-judge), AI-assisted development workflows, TensorFlow/Keras neural networks, model training and validation

PROFESSIONAL EXPERIENCE

Amazon, Ontario, Canada (Hamilton, St. Thomas, London, Mississauga) 05/2021 – Present
Global e-commerce and logistics; roles within the North American Fulfillment Center network (warehouse operations, quality, and automation).

Data Analyst | Cloud & Full-Stack Engineering, AI Automation 02/2025 – Present

- Designed, built, and operate 20+ serverless automations and services (Python/pandas, TypeScript, AWS Lambda, EventBridge, CDK) that ingest and process operational data from S3 and internal APIs and deliver real-time alerts to operations managers via Slack, SES, and SNS.
- Designed and shipped backend and data capabilities for our site's quality management platform (React 19, TypeScript, tRPC, AWS CDK), in daily production use: tRPC API endpoints, DynamoDB data modeling with GSI-backed queries, S3 integrations, and defect analytics dashboards.
- Designed a deterministic scheduling algorithm that auto-generates weekly indirect-role assignments from training and shift data, balancing load across associates while enforcing coverage priorities and weekly hour caps, replacing a fully manual planning process.
- Built an LLM-powered Slack bot on Amazon Bedrock that answers operational questions from S3 data, covering the full integration: IAM permissions, SSM-based secret management, prompt design, and response formatting.
- Hardened production infrastructure with least-privilege IAM policies, VPC gateway endpoints, CloudTrail data-event logging, S3 server access logging, and runtime secret retrieval from SSM Parameter Store (eliminating credentials from CloudFormation templates).
- Delivered all platform contributions at 100% line, branch, and function test coverage using Vitest, property-based testing (fast-check), snapshot and Storybook tests, and WCAG 2.1 AA accessibility checks, validated through a multi-stage CI/CD pipeline with promotion blockers.
- Owned my automation portfolio end-to-end as sole developer: stakeholder requirements, architecture, infrastructure-as-code, CI/CD pipelines, gradual deployments, production debugging (Lambda cold starts, caching, IAM), and CloudWatch monitoring.

- Modernized a script-based team by introducing serverless architecture, Docker-based development, and IaC practices through architecture reviews and shared design documentation.

Operations Lead / Quality Assurance Specialist

05/2021 – 02/2025

- Led fulfillment teams of 50+ associates; performed root-cause analysis of quality and delivery defects and drove systemic fixes. This frontline context now shapes which problems the tools above solve.

University of Guelph, Guelph, ON Graduate Teaching & Research Assistant

01/2019 – 04/2021

- Designed and validated experimental research setups, correlated experimental against simulation data, co-authored a peer-reviewed publication, and lectured groups of 75-150 students.

KFUPM, Dhahran, Saudi Arabia Graduate Research & Teaching Assistant

09/2016 – 12/2018

- Conducted multiphase fluid flow R&D with Saudi Aramco: experimental design, CFD modeling, and physics-based validation; co-authored 2 peer-reviewed journal papers.

TECHNICAL PROJECTS

Noor AI: Conversational RAG Q&A System | [GitHub](#) | [Demo](#) | [Live](#)

Production Retrieval-Augmented Generation (RAG) system for Islamic knowledge Q&A over the Quran and major hadith collections. AWS Bedrock (Claude + Cohere multilingual embeddings), Bedrock Knowledge Base with S3 Vectors, LangChain agent with DynamoDB conversation memory, streaming FastAPI backend on Lambda (Function URL + Lambda Web Adapter, no API Gateway), Next.js/Tailwind frontend behind CloudFront, all provisioned as 6 AWS CDK stacks. Citation-safe retrieval design: corpus pre-split per verse/hadith with precomputed metadata so the LLM cites verbatim and cannot fabricate references. Full evaluation and observability layer: 219 automated tests, per-request structured traces (latency, tokens, cost) feeding a CloudWatch dashboard and alarms, an offline eval harness with a versioned golden dataset, LLM-as-judge scoring, and a user feedback loop that routes bad production queries back into the eval dataset.

Quality Management Platform — Backend & Data Features (*Amazon Confidential*)

Serverless web application for tracking, researching, and coaching on inventory discrepancies, in daily production use at our fulfillment center. Built on an internal full-stack foundation (Nx/TypeScript monorepo, React 19 + CloudScape, tRPC Lambda API); designed and shipped the data and backend layer: DynamoDB modeling with GSI-backed queries, S3 integrations, defect analytics dashboards, and an algorithmic weekly role-scheduling planner that replaced a fully manual process.

YasMade: E-Commerce Platform | [GitHub](#) | [Demo](#) | [Live](#)

Production e-commerce platform serving live customers. React (Vite) and Supabase full-stack app with secure checkout, admin dashboard, product management, and Zustand global state with optimistic updates; iterating in production against real business feedback.

EDUCATION & CERTIFICATIONS

AWS Certified Solutions Architect - Associate, Amazon Web Services

03/2026

IBM Machine Learning with Python and Deep Learning & Neural Networks with Keras, Coursera

03/2026

AWS Certified Cloud Practitioner, Amazon Web Services

07/2025

Full-Stack Web Development Bootcamp, Flatiron School (Python & JavaScript)

10/2023

MEng, Mechanical Engineering, University of Guelph, GPA 91%

02/2021

MSc, Mechanical Engineering, KFUPM, GPA 3.95/4.00 (thesis-based)

12/2018

BSc, Mechanical Engineering, KFUPM, GPA 3.92/4.00

05/2016

PUBLICATIONS

Three peer-reviewed publications in fluid mechanics, heat transfer, and thermodynamics, published under the legal name Mohamed Hussein:

- Two-Phase Flow Mass Transfer Analysis of Airlift Pump for Aquaculture Applications. *MDPI* (2021)
- CFD Modeling of Liquid Film Reversal of Two-Phase Flow in Vertical Pipes. *J. of Petroleum Exploration and Production Technology* (2019)
- Effect of Temperature-Dependent Properties on Fin Performance Under Dehumidifying Conditions. *Int. J. of Refrigeration* (2018)
